

Abstract

A freshman in college may not have the confidence to try put new things. They may be confused and unaware about the activities in the college. Its often taking the students too long to get things rolled out, make connections and finally get on track.

We need to speed up this process to help the students progress in their career and for that what they need is a proper guidance.

In this project we aim of providing a virtual guide to all those who are clueless or are stuck somewhere. Our goal is to build a platform where students can get answers to their questions, learn about college events , receive advice on innovations and enough mentoring on all areas.

The idea is to establish a connection with the students, seniors, faculties through a Whatsapp interface. Interface will provide succinct and accurate responses to keep students updated.
